

CHI - Blanket Care Instruction

Use with people age 12 and older.
The Pet Blankets can be used for adult pets.

Use all blanket models as needed, twice per day if needed.

Do not use or store around TV, microwave ovens, Fluorescent Lights, or other electromagnetic or radioactive gadgets.

NEVER USE WITH AN ELECTRIC BLANKET.

It can be stored on a hanger in the open air. Where and where possible, hang outside in the SUN to rebalance the energy of the blanket.

Never wash or dry clean inside blanket. Only wash and dry the outer cover. No machine drying. Let cover air dry.

Do not treat the CHI Blanket like a regular blanket. Soft fold blanket no more than twice without creating a crease in it. Better to roll blanket up when carrying and traveling.

During the winter months, you may receive a mild shock on occasion when you touch the blanket. This is natural due to some metal fibers in the blanket.

It is highly recommended that you use the CHI Blanket at least a minimum of 20 miles from nuclear energy plant. This is due to the nature of the energy. To find out how far you are to a nuclear facility in your area use any internet search engine, (like Google), or mapquest.com
